

CLAIM AMENDMENTS

1. (Original) A cleaning apparatus comprising:

a wound roll with outward facing adhesive surfaces, the roll formed of a plurality of separable sheets, each defined by an edge separable from an adjacent sheet;

a roll support rotatably supporting the roll; and

means, carried on at least one of the roll and the roll support, for orienting the edge of each sheet, as the edge of each sheet becomes the outermost edge of the roll, in a predetermined orientation on the support.

(Claims 2-7 Cancelled)

8. (Original) The apparatus of claim 1 wherein:

the support includes a handle and a spindle axially fixedly extending from the handle, a rotatable member rotatably mounted on the spindle, the roll mounted on the rotatable member; and

the orientating means includes a projection on one of the handle and the rotatable member, and spaced members carried on the other of the handle on the rotatable member and defining the channel for receiving the projection to lock the rotatable member from rotation with respect to the handle.

9. (Original) The apparatus of claim 8 wherein the orienting means comprises:
a projection carried on the spindle; and
a latch member carried on the rotatable member and engageable
with the projection to stop rotation of the rotatable member.

(10-13 Cancelled)

14. (Original) The apparatus of claim 8 further comprising:
means, carried in the support, for rotating the spindle.

(15-29 Cancelled)

30. (Previously Presented) The apparatus of claim 1, wherein the roll support
comprises:
a handle;
a spindle; and
means carried on the handle and the spindle, for rotatably coupling the spindle to
the handle.

31. (Currently Amended) The apparatus of claim 30 wherein the orienting
means comprises:
a stop carried on one of the handle ~~in~~ and the spindle; and

an arm carried on the other of the handle and the spindle and rotatably
~~engagable~~ engeagable with the stop at the ~~orientation of the point~~.

32. (Currently Amended) The apparatus of claim 1 wherein the separable edge
of each of the plurality sheets in the ~~round~~ roll are radially aligned.

33. (Cancelled)

34. (Previously Presented) The apparatus of claim 14 wherein the rotating
means comprises:

means for mechanically rotating the spindle.

35-47 (Cancelled)

48. (New) The apparatus of claim 1, wherein the roll support comprises a
rotatable spindle.

49. (New) The apparatus of claim 48, wherein said spindle includes at least
one rotatable collar for engaging said wound roll.

50. (New) The apparatus of claim 49, wherein said at least one collar
comprises a pair of opposed rotatable spaced collars with a carriage formed of a
plurality of straps rotatably located therebetween.

51. (New) The apparatus of claim 49, wherein said orienting means comprises at least one stop member fixedly carried on said at least one collar.

52. (New) The apparatus of claim 51, wherein said at least one stop member comprises a pair of stop members carried on said at least one roller for defining a channel therebetween.

53. (New) The apparatus of claim 52, further including a handle extending from said rotatable spindle.

54. (New) The apparatus of claim 53, wherein said handle carries a latch member releasably engageable in said channel.

55. (New) The apparatus of claim 54, wherein both said stop members and said latch members are rounded in form to facilitate engagement and disengagement of said latch member in said channel.

56. (New) The apparatus of claim 48, wherein said orienting means comprises a stop member carried on said spindle.
